

PRAVEEN KUMAR S

Software Developer Python · JavaScript · Django · React.js · AI
+91 73582 57338 | praveensankar3333@gmail.com | Chennai, Tamil Nadu | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Developer with strong data structures and algorithms fundamentals, who independently builds production-grade, AI-integrated full stack applications end-to-end. Built a local LLM orchestration engine and an AI-powered coding intelligence studio, both from scratch. Writes clean, decoupled backend APIs and responsive React frontends. Strong grasp of system architecture and DB design.

TECHNICAL SKILLS

Languages	Python, JavaScript (ES6+)
Frontend	React.js, Tailwind CSS, HTML5, CSS3, Bootstrap, jQuery
Backend	Django, Django REST Framework, REST APIs
Databases	PostgreSQL, MySQL, SQLite, Django ORM
AI & LLM	Prompt Engineering, Ollama (Qwen, Phi, Mistral, Llama), Google Gemini API
DevOps	Git, GitHub, CI/CD, Vercel
Foundations	MVT Architecture, Data Structures & Algorithms, SDLC

EXPERIENCE

Python Full Stack Developer Intern. May 2026 – Present
Besant Technologies, Porur, Chennai.

- **Completing a hands-on internship focused on full-stack web development**, working across the entire stack from backend API design to frontend UI implementation using Python, Django REST Framework, React, and relational databases - MySQL.
- **Designed and built RESTful APIs using Django REST Framework** including model design, serializers, and CRUD endpoints, applying Django's ORM to manage database schema, relationships, and migrations without writing raw SQL queries. Collaborated with mentors to review code quality and refine implementation approaches based on feedback.
- **Developed a CRUD based application** with full create, read, update, and delete functionality, connecting a React frontend to Django backend APIs for real-time data handling and Built responsive, component-based user interfaces in React, managing state and props.
- **Strengthened problem-solving and debugging skills** by working through real project requirements, translating them into working code across both frontend and backend layers, and practiced Git and GitHub for version control, including committing changes.

PROJECTS / PRACTICAL EXPERIENCE

Privacy First Local LLM Orchestration Engine Jun 2026
[Django REST Framework](#) · [React.js](#) · [Ollama](#) · [Python](#) · [SQLite](#)

- Eliminated API cost entirely and maximized data privacy - Fully offline on consumer hardware via Ollama, sub-6000ms inference latency, zero cloud dependency and no data exposure - ensuring 100% data privacy for the user and zero API cost.
- Built without LangChain or any third-party orchestration framework - custom Django REST layer handles all message routing, LLM inference orchestration, and session state management from scratch.
- Shipped a ChatGPT-grade React frontend with persistent multi-session memory, real-time streaming UI, and zero page reloads. Tested the engine across 4 LLM families (Qwen, Phi, Mistral, Llama) via Ollama to validate inference compatibility and response quality.

AI Powered Coding Intelligence Studio May 2026
[React.js](#) · [Django REST Framework](#) · [Google Gemini API](#) · [Python](#) · [JavaScript](#)

- Unified three developer tools into one platform - GENERATE (writes code from Scratch) / EXPLAIN (explains the user given code) / DEBUG (debugs and pinpoints errors) in a Single Page React Application, producing end-to-end responses in < 5 seconds.
- Architected for replaceability - stateless Django REST layer fully decouples and separates the AI model from the React frontend, which means swapping from Gemini to GPT-4 or Claude can be done faster with zero frontend changes.
- Validated across five programming languages (Python, C++, Java, C#, PHP), confirming structured prompt pipelines for stable and consistent LLM output across various languages without latencies and errors.
